Hosting Seekers WHMCS API

These api files allow you directly fetch hosting plans (WHMCS products) from your WHMCS om hosting seekers portal.

## How to upload the module files?

1. Unzip the download folder and upload the **includes** folder at your **WHMCS_INSTALLATION_DIR** using FTP/SFTP/cPanel

Verify module upload.

1. Go to the "***WHMCS_INSTALLATION_DIR*** */includes/api*" and check the file **Getproductgroupshs.php, getproductsbygidhs.php**.

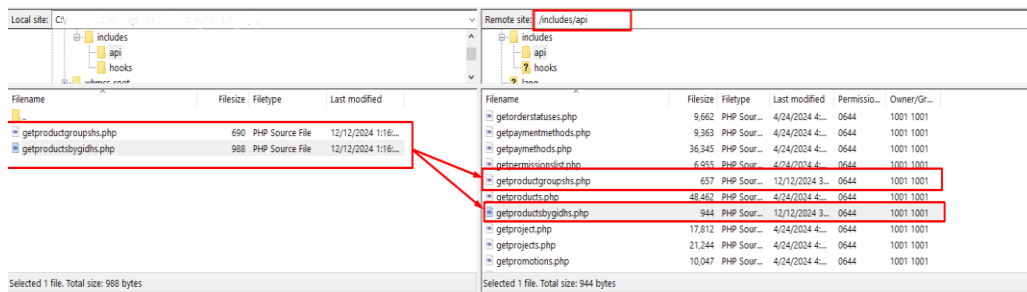

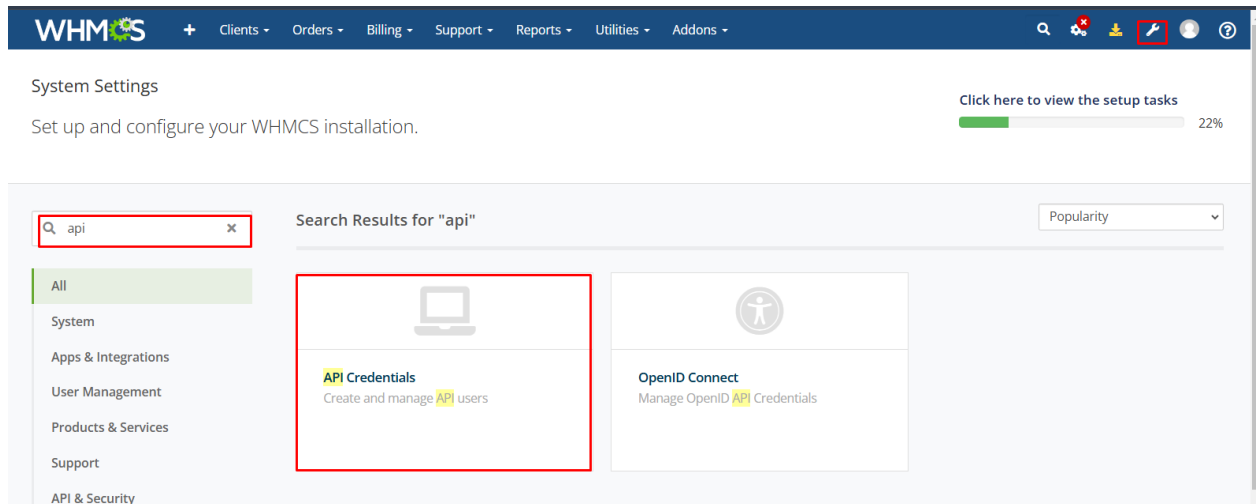

2. Go to the " ***WHMCS_INSTALLATION_DIR*** */includes/hooks*" and check the file **apirole.php**.

## How to configure the module?
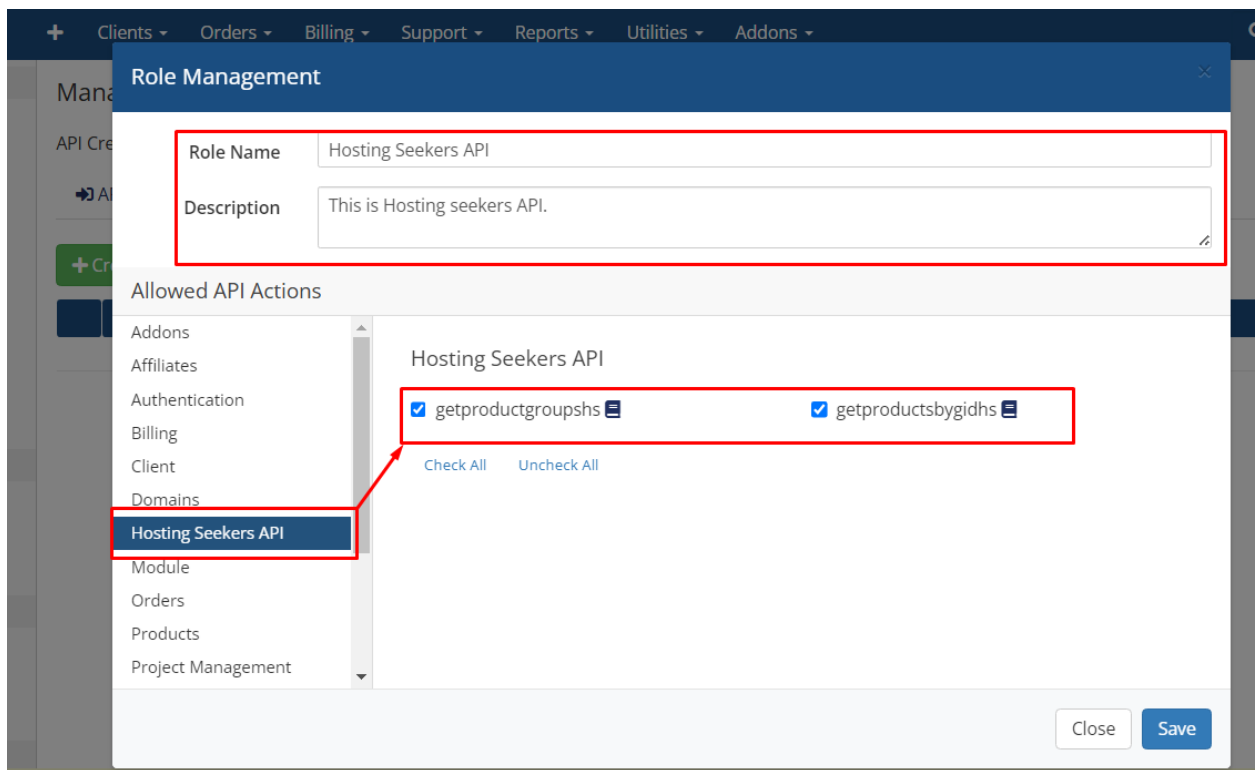

1. Log in to your WHMCS admin area. Go to *System Settings >> Find* **API Credentials and** click on it.

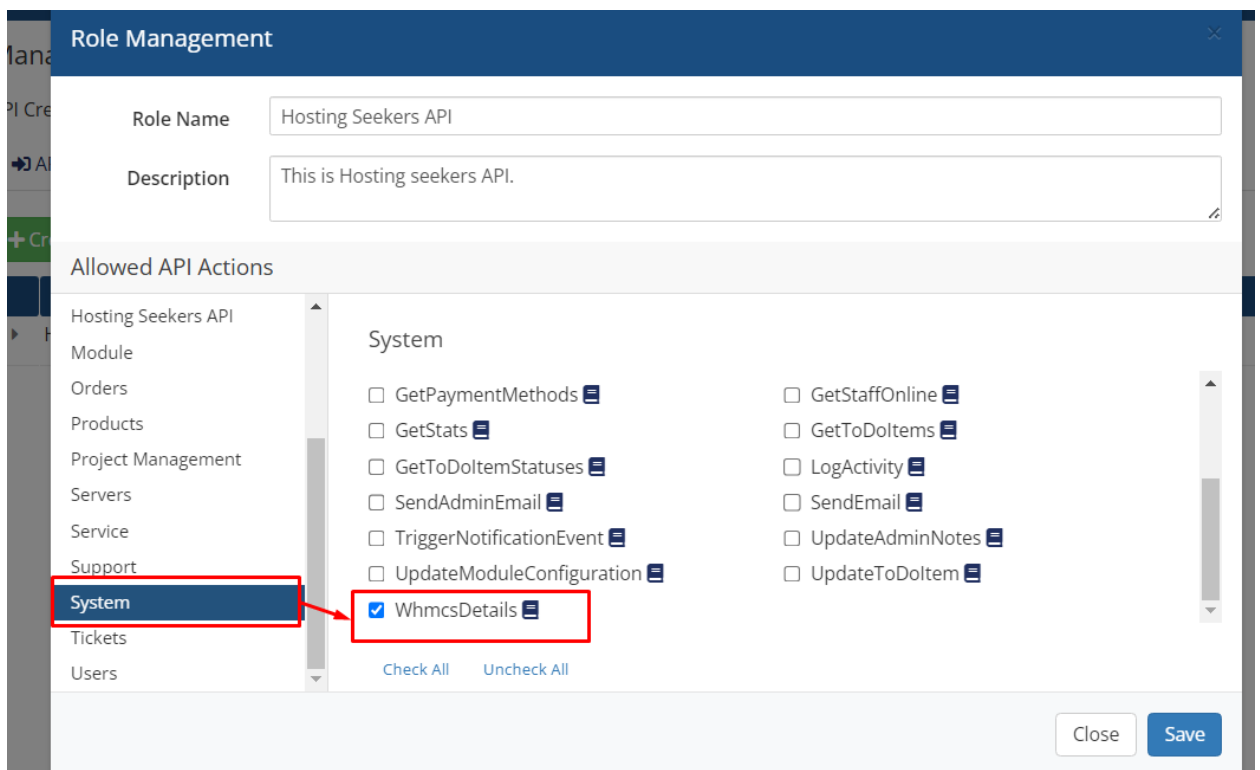

2. Next click on the **API Roles** and after click **Create new API** Role.

3. Enter the **Role Name** and **Description** for the API. Then, under **Allowed API Actions**, click on "**Hosting Seekers API**" and click on **Check All.**

4. Again, under **Allowed API Actions**, click on "**System**" check **WhmcsDetails,** and click **Save**.

5. Next, click on **API Credentials**, then select **Generate New API Credential**.

6. A popup will appear. Select the **Admin User**, **Description**, and the **API role(s)** you created earlier (e.g., "Hosting Seekers API"), then click **Generate**.

7. Copy **Identifier** and **Secret and** store them securely on your system.
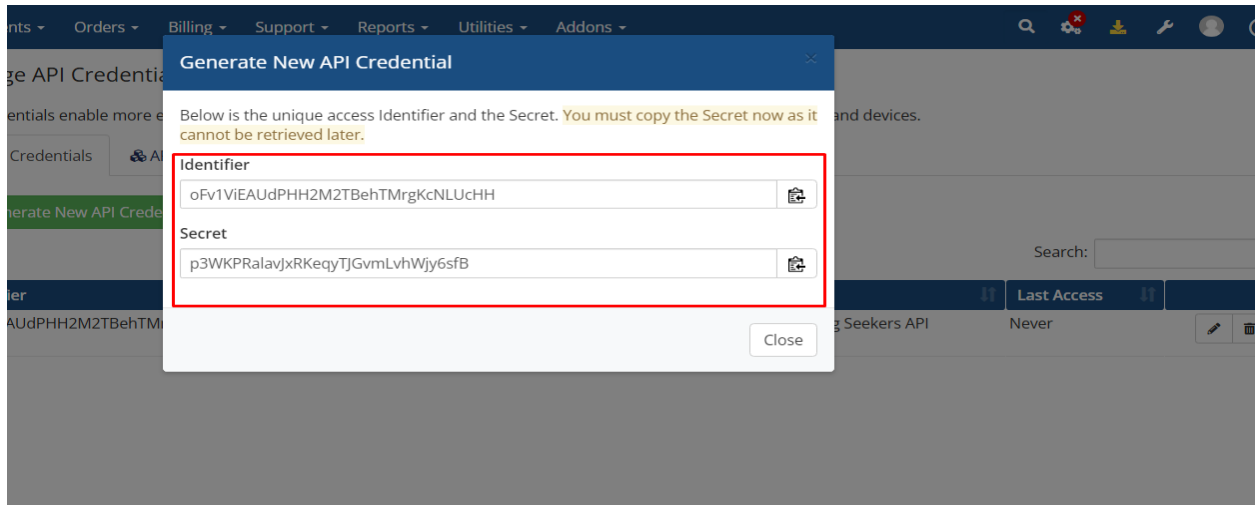

8. Now, log in to your *Hosting Seeker Dashboard* in the new tab. Then, click on **Manage Company Profile**, and click on **Connect to WHMCS**.
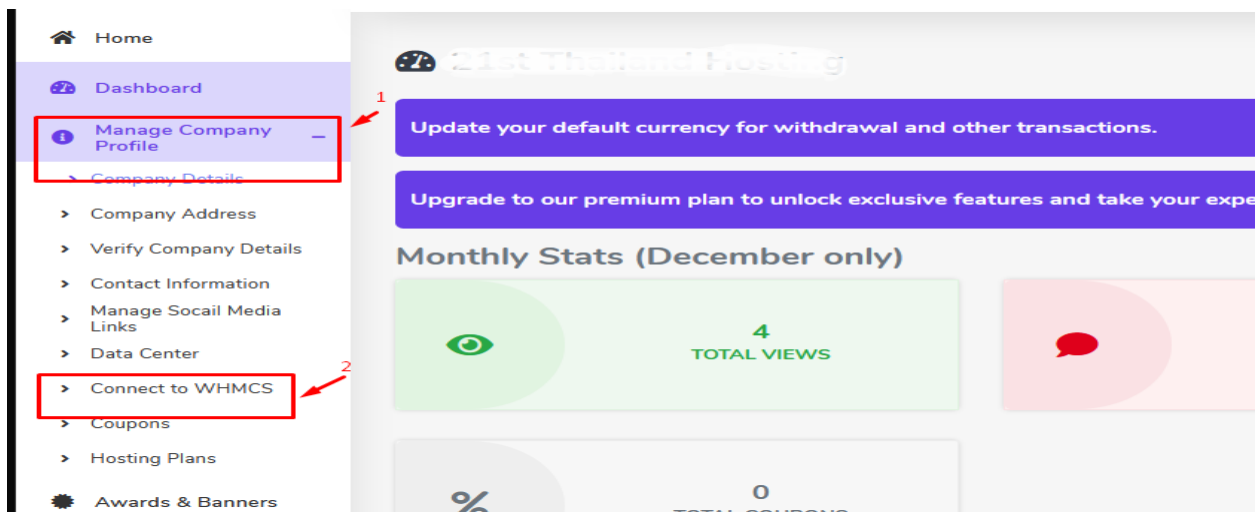

9. You will be redirected to the "**Connect to WHMCS**" page. Enter the WHMCS System URL. To find this URL, login into your WHMCS admin area and go to **System Settings** > **General Settings**, and under the **General** tab, you will see the **WHMCS System URL**. Copy the URL and paste it into the **WHMCS System URL** field on the Hosting Seeker dashboard.

10. Additionally, enter the **WHMCS API Identifier** key generated in step 6) and the **WHMCS API Secret** generated in step 6) and click on **Connect** button.

11. Click on **Copy IP.**

and then go to WHMCS admin area and go to **System Settings** > **General Settings and** click on the **Security** tab and under **API IP Access Restriction,** click on **Add IP** and paste IP (copied in step11) and enter **notes**. Next click on the **Add IP** button.
